

11. Glossary of Technical Terms

Glossary of Technical Terms

1	AUX	Auxiliary power supply for operating external circuit.
2	Base plate	All modular products have an aluminum mounting base at which Cosel specifies operating temperatures and which should be affixed to a thermally conductive surface for cooling.
3	Basic insulation	Insulation to provide basic protection against electric shock.
4	CB	Current balance pin
5	CE	Instruction to demand safety, quality control, and environmental destruction prevention of equipment sold in EU.
6	CISPR Public.22	International Standard of Line conduction and radiated noise.
7	Class 1	Equipment where protection against electric shock is achieved by : (1) Using BASIC INSULATION, and also (2) Providing a means of connecting to the protective earthing conductor in the building wiring those conductive parts that are otherwise capable of assuming HAZARDOUS VOLTAGES if the BASIC INSULATION fails.
8	Common mode noise	Noise present equally on two conductors with respect to some reference point ; often used specifically to refer to noise present on both the hot and neutral AC line with respect to ground.
9	CSA : C22.2 No.60950-1	Canadian Standards Association, An independent Canadian organization concerned with testing for public safety. C22.2 No.60950-1 is testing requirement for power supply.
10	C-UL	UL standard authorized in Canada.
11	Derating	Reducing the output power of a power supply with increasing temperature to maintain reliable operation.
12	Double insulation	Insulation comprising both BASIC INSULATION and SUPPLEMENTARY INSULATION.
13	Efficiency	The ratio of total output power to active power, expressed in percent. This is normally specified at full load and nominal input voltage.
14	EMC	Electro Magnetic Interference. Any electric disturbance that interrupts, obstructs, or otherwise impairs the performance of electric equipment.
15	EN60950	Safety of information technology equipment including electrical business equipment approved by CENELEC.
16	ENA	Enable signal pin
17	FCC class A/B	American Standard of Line conduction and radiated noise.
18	Fuse	Blowing category's are first blow, normal blow, slow blowing.
19	Harmonic current	Input current included higher harmonic element.
20	Heat sink	A medium of high thermal mass that can absorb (sink) heat indefinitely with negligible change in temperature. Heat sinks are not necessarily needed with Cosel modules, and their use is highly dependent on the individual application, power and ambient temperature.
21	Hold-up time	The time during which a power supply's output voltage remains within specification following the loss of input power.
22	Hot swap	Insertion and extraction of a power supply into a system while power is applied.
23	Inrush current	The peak instantaneous input current drawn by the power supply at switch ON.
24	IOG	Inverter operation monitor pin
25	Line conduction	The noise generated in the power supply means the amount which goes out to the input line.
26	line-drop	Phenomenon that voltage decreases with electric wire etc. Because the voltage reduction grows when the resistance of the electric wire is large, you should use the one with a large diameter of the line.
27	Low voltage instruction	The product driven by a low voltage of AC50V - AC1000V or DC75V - DC1500V is an object. Instruction to which thing that danger is not caused by electric cause is requested.

Glossary of Technical Terms

28	Negative logic	The signal is high. When Remote ON/OFF output voltage is able.
29	Over current protection	A power supply protection circuit that limits the output current under overload condition.
30	Over voltage protection	A circuit that either shuts down the power supply or crowbars the output in the event of an output over voltage condition.
31	Parallel operation / master slave operation	(1) Connecting the outputs of two or more power supplies together for the purpose of obtaining a higher output current. This requires power supplies specially designed for load sharing. (2) Output voltage in parallel operation is adjustable by using the potentiometer of the 'master' unit. Select one power supply to be the master, and turn the potentiometer of the other, 'slave' power supplies, clockwise to the end. Then use the potentiometer of the master to adjust output voltage.
32	Positive logic	The signal is low. When Remote ON/OFF output voltage is able.
33	Power fail	The ratio of active power to apparent power in an AC circuit. In power conversion technology, power factor is used in conjunction with describing AC input current to the power supply. factor is used in conjunction with describing AC input current to the power supply.
34	PR	Power Ready signal pin
35	Radiated noise	The noise generated in the power supply is an amount of which the power supply becomes an electric wave from the input line and the output line and goes out again.
36	Referential made noise	Noise generated between line and line. Normal mode noise as a by name.
37	Reinforced insulation	A single insulation system which provides a degree of protection against electric shock equivalent to DOUBLE INSULATION.
38	Remote ON/OFF	(1) Converter shutdown into a standby or idle mode by application of an external signal to the Remote ON/OFF terminal. (2) Converter shut down by an external logic signal.
39	Remote sensing	A technique of regulating the output voltage of a power supply at the load by means of sensing leads which go from the load back to the regulator. This compensates for voltage drops in the load leads.
40	Ripple and noise	The amplitude of AC component on the DC output of a power supply usually expressed in mill volts peak-to-peak or rms. For a linear power supply it is usually at the frequency of the AC mains. For a switching power supply, it is usually at the switching frequency of converter stage.
41	Safety ground	A conductive path to earth that is designed to protect persons from electrical shock by shunting away any dangerous currents that might occur due to malfunction or accident.
42	Series Operation	Connecting the outputs of two or more power supplies together for the purpose of obtaining a higher output voltage.
43	SR	The pin for connecting an internal resistor to reduce inrush current.
44	The highest ambient temperature	The highest value of ambient temperature by which electric specification can be guaranteed when power supply operates.
45	Thermal grease	Grease of silicon. This used as a thermal interface between the converter and a heat sink or chassis.
46	Thermal protection	A power supply protection circuit that shuts the power supply down in the event of unacceptably high internal temperature.
47	TRM	Adjustment of output voltage pin
48	TUV	German Standards Association, An independent German organization concerned with testing for public safety. EN60950 is testing requirement for power supply units.
49	UL	American Standards Association, An independent American organization concerned with testing for public safety. UL60950 is testing requirement for power supply.
50	VB	Voltage balance pin
