1 Connection for Standard Use

In order to use the power supply, it is necessary to wire as shown in Fig.1.1.

When remote ON / OFF function is not used, please open RC pin or short between RC and -Vin pin.
When alarm function is not used, please open ALM pin.
In parallel and series operation, connect each PO pin mutually. When PO function is not used, please open PO pin.
The SFS / SFCS series handles only the DC input. Avoid applying AC input directly. !! It will damage the power supply. !! Operate with the convection or forced air cooling. [Reference: “Derating”]

2 Wiring Input/Output Pin

2.1 Wiring input pin

(1) External fuse
The SFS / SFCS series is not internally fused. To ensure safe operation and to receive each Safety Standards approvals, please install an external fuse (fast-blow type).
When the input voltage from a front end unit is supplied to multiple units, install a fast-blow type fuse in each unit.
Fuse must be connected to the +Vin side if to -Vin side is used as a ground, or fuse must be connected to -Vin side if +Vin side is used as a ground.

Table 2.1 Recommended fuse (fast-blow type)

<table>
<thead>
<tr>
<th>Model</th>
<th>Rated current</th>
</tr>
</thead>
<tbody>
<tr>
<td>SFS1524 / SFCS1524</td>
<td>2A</td>
</tr>
<tr>
<td>SFS3024 / SFCS3024</td>
<td>4A</td>
</tr>
<tr>
<td>SFS1048/SFS1548/SFS1548</td>
<td>1A</td>
</tr>
<tr>
<td>SFS2048/SFS3048/SFCS3048</td>
<td>2A</td>
</tr>
</tbody>
</table>

(2) External capacitor on the input side
When the distance from the DC line to the unit is greatly extended, it makes the input feedback noise much higher and the input voltage several times higher than the normal level when turned ON. If this happens, the output power also becomes unstable. In order to prevent the unit form failing in this way; please connect Ci to the input pin. In addition, when the filter with “L” is used, please Ci to the input pin.

![Fig.1.1 Connection for standard use](image1)

![Fig.2.1 Connection method of capacitor at input pin](image2)

![Fig.2.2 Recommended external input filter](image3)

Table 2.2 Recommended capacitance Ci

<table>

<th>SFS3024 / SFCS3024</th>
</tr>
</thead>
<tbody>
<tr>
<td>Ci</td>
<td>33μF</td>
<td>68μF</td>
</tr>
<tr>
<td>Model</td>
<td>SFS1048/SFS1548/SFS2048/SFCS1548</td>
<td>SFS3048/SFCS3048</td>
</tr>
<tr>
<td>Ci</td>
<td>10μF</td>
<td>22μF</td>
</tr>
</tbody>
</table>

Note: When input line inductance becomes excessively high due to insertion of choke coil, operation of the unit could become unstable. In this case, increase Ci value more than the value indicated above.

(3) Conducted noise
Install an external input filter as shown in Fig.2.2 in order to reduce conducted noise.
The result for this solution is shown in Fig.2.3.
(4) Reverse input voltage protection  
Avoid the reverse polarity input voltage. It will damage the unit. It is possible to protect the unit from the reverse input voltage by installing an external diode as shown in Fig.2.4.

2.2 Wiring output pin  
When the SFS / SFCS series supplies the pulse current for the pulse load, please install capacitor Co between +Vout and -Vout pins.

Ripple and ripple noise are measured, as shown in the Fig.2.6, by connecting Co and JEITA attachment.

3 Function

3.1 Overcurrent protection (OCP) and Low voltage protection (LVP)  
- OCP and LVP circuits is built-in. LVP will trigger after 200ms typ delay when OCP activates and output voltage drops down 90% max (SFS20 : 95% max) of the rated output voltage.  
- When LVP is activated, ALM signal will becomes low impedance.  
- Recovery from the protection is accomplished by applying 5VDC or less input for at least 1 second, or toggling remote ON / OFF signal for at least 1 second.

3.2 Overvoltage protection (OVP)  
- The overvoltage protection circuit is built-in and comes into effect at 120% to 140% (SFS20 : 115% to 145%) of the rated output voltage. When the load factor is less than 50%, output voltage may be increased more than maximum voltage by the failure mode.  
- Normal or abnormal operation of the unit can be monitored by using the ALM pin. When OVP is activated, ALM signal will become low level.  
- The DC input should be shut down if overvoltage protection is in operation.  
- Please note that devices inside the power supply might fail when voltage more than rated output voltage is applied to output pin of the power supply. This could happen when the customer tests the overvoltage performance of the unit.

3.3 Remote ON / OFF (RC pin)  
- Remote ON / OFF circuits is built-in on input side.  
- When remote ON / OFF function is not use, please open-circuit between RC and +Vin or short-circuit between RC and -Vin.  
- Recovery from the protection is accomplished by applying 5VDC or less input for at least 1 second, or toggling remote ON / OFF signal for at least 1 second.
3.4 Alarm (ALM pin)

■ Normal or abnormal operation of the unit can be monitored by using the ALM pin.
■ When OVP or LVP are activated, ALM pin becomes same level as -Vin pin.
■ The sink current of ALM pin is 10mA max.

By connecting ALM pin in parallel and series operation, when one unit has shut down by overvoltage protection or low voltage protection, other units will be shut down.
■ When alarm function is not use, please open ALM pin.
■ Total number of units should be no more than 20 pieces.

3.5 Start in / out (PO pin)

■ By connecting PO pin, difference of start-up voltage and stop voltage can be prevented.
■ In parallel and series operation, please connect each PO pin mutually.
■ Total number of units should be no more than 20 pieces.

3.6 Sequence

■ The sequence time chart of Vin, Vout, PO, ALM and RC pins is shown in Fig.3.4.

3.7 Isolation

■ For a receiving inspection, such as Hi-Pot test, gradually increase (decrease) the voltage for a start (shutdown).
Avoid using Hi-Pot tester with the timer because it may generate voltage a few times higher than the applied voltage, at ON / OFF of a timer.
# 4 Series and Parallel Operation

## 4.1 Series operation

In series operation, connect each PO and ALM pin mutually, wiring as Fig.4.1.

![Fig.4.1 Examples of series operation](image1)

- **Fig.4.1** Examples of series operation

## 4.2 Parallel operation

- **In** parallel operation, connect each PO and ALM pin mutually, wiring as Fig.4.2.
- **To** improve the load sharing of each unit, please use the same length from each unit to the load.
- **Total number** of units should be no more than 10 pieces.

![Fig.4.2 Example of parallel operation](image2)

- **Fig.4.2** Example of parallel operation

## 5 Cleaning

- **When** cleaning is necessary, follow the undermentioned condition.
  - **Method:** Immersion, ultrasonic wave and vapor
  - **Cleaning agents:** IPA (Solvent type)
  - **Total time:** 2 minutes or less
- **After** cleaning, dry them enough.

## 6 Storage method

- **To stock** unpacked products in your inventory, it is recommended to be kept under controlled condition, 5-30℃, 60%RH and be used within a year.
- **24-hours-baking** is recommended at 125℃, if unpacked products was kept under uncontrol condition, in which 30℃, 60%RH or higher.
  - **Original tray** is not heat-resistant, please move them to heat-resistant tray preparing to bake them.
  - **To check** moisture condition in the pack, silica gel packet has some moisture condition indicator particle.
  - **Indicated** blue means good. Pink means alarm to bake it.
- **Notification.** the tray will be deformed and the power supply might be damaged, if the vacuum pressure is too much to reseal.
7 Safety Considerations

To apply for safety standard approval using this power supply, the following conditions must be met.

- This unit must be used as a component of the end-use equipment.
- The equipment does neither contain any basic nor double / reinforced insulation between input and output.
- If the input voltage is greater than 60VDC, this has to be provided by the end-use equipment according to the final build in condition.
- Safety approved fuse must be externally installed on input side.

8 Temperature Measuring Point

- In case of forced air, ventilation must keep the temperature of point A and B below 120°C. Refer to Fig.8.1 for the location of point A and B.

9 SMD type Package Information

9.1 Delivery package information (SFS series SMD type)

- These are packed in a tray (Fig.9.1, 9.2).
- Capacity of the tray is 15 max.
- In case of fractions, the units are stored in numerical order.

Fig.8.1 Location of point A and B

Fig.9.1 Delivery package information(SFS10/SFS15/SFS20)

Fig.9.2 Delivery package information(SFS30)
9.2 Delivery package information (SFCS series SMD type)

- These are packed in a tray (Fig.9.4).
- SFCS15 and SFCS30 can be used in the same pallet tray.
- But the orientation of the power supplies is different.
- Capacity of the tray is 10 max.
- In case of fractions, the units are stored in numerical order.
- Do not cut or deform the tray.
