DBS-series

Feature
- Ideal for distributed power systems
- Thin and small size
- Built-in overcurrent, overvoltage and thermal protection circuits
- Built-in remote ON/OFF (on both side of input and output)
- Inverter operating monitoring (IOG)
- Mounting hole (M3 tapped)
- The beet noise is decreased by installing of the crystal oscillator (DBS700)

CE marking
- Low Voltage Directive
- RoHS Directive

Safety agency approvals
- UL, C-UL recognized, TÜV approved

5-year warranty
**DBS100A/DBS150A**

DC-DC Converters Bus Converter. Power Module Type

### Notes

1. At rated input (DC110V) and rated load.
2. Ripple and ripple noise is measured by using measuring board with the recommended capacitor Co & the film capacitor 0.1μF.
3. Measured by 20MHz oscilloscope or Ripple Noise meter (Equivalent to KEISOKU-GIKEN:RM101). Refer to the manual.
4. Drift is the change in DC output for an eight hour period after a half-hour warm-up at 25°C, with the input voltage held constant at the rated input/output.
5. Please consult us in regard to use from -40°C.

- **TEMPERATURE REGULATION[℃]**: 0 to +65, 35max, 50max, 75max, 120max, 180max, 280max, 280max, 280max
- **DRIFT[℃]**: 16max, 20max, 30max, 40max, 60max, 60max, 90max, 90max
- **START-UP TIME [ms]**: 200max (DCIN 280V, Io=100%)
- **OUTPUT VOLTAGE ADJUSTMENT RANGE**: Fixed (TRM pin open), 60 - 110% adjustable by external VR or external voltage

**Protection, Circuit and Others**
- **Overshoot Protection**: Works over 105% of rating and recovers automatically
- **Overvoltage Protection**: 4.00 - 5.50V, 4.00 - 5.50V, 5.75 - 7.00V, 8.60 - 10.50V, 13.80 - 16.80V, 17.25 - 21.00V, 20.70 - 25.20V, 27.60 - 33.60V, 32.20 - 39.20V
- **Remote Sensing**: Provided
- **Remote On/Off**: Provided (On both side of input and output)

**Isolation**
- **Input-Output**: AC3.000V 1minute. Cutoff current = 10mA, DC500V 50MΩ min (20±15℃)
- **Input-FG**: AC2.000V 1minute. Cutoff current = 10mA, DC500V 50MΩ min (20±15℃)
- **Output-FG**: AC500V 1minute. Cutoff current = 100mA, DC500V 50MΩ min (20±15℃)
- **Output-RC2,RC3**: AC100V 1minute. Cutoff current = 100mA, DC100V 10MΩ min (20±15℃)

**Environment**
- **Operating Temp, Humidity and Altitude**: -20 to +85℃ (On an aluminum base plate), 20 - 95%RH (Non condensing) (Refer to "Derating"). 3,000m (10,000feet) max
- **Storage Temp, Humidity and Altitude**: -40 to +85℃, 20 - 95%RH (Non condensing), 9,000m (30,000feet) max
- **Vibration**: 10 - 55Hz, 9.9m/s² (5G), 3minutes period, 60minutes each along X, Y and Z axis
- **Impact**: 196.1m/s² (20G), 11ms once each along X, Y and Z axis

**Safety**
- **Agency Approvals**: UL60950-1, C-UL, EN60950-1, EN50178 Complies with DEN-AN and IEC60950-1
- **Others**: Case Size/Weight: 61 x 12.7 x 116.8mm [2.4 x 0.5 x 4.6 inches] [W x H x D] / 180g max
- **Cooling Method**: Conduction cooling (e.g. heat radiation from the aluminum base plate to the attached heat sink)

Cooling Method:

Conduction cooling (e.g. heat radiation from the aluminum base plate to the attached heat sink)

---

1. At rated input (DC280V) and rated load.
2. Ripple and ripple noise is measured by using measuring board with the recommended capacitor Co & the film capacitor 0.1uF. Refer to the manual.
3. Drift is the change in DC output for an eight hour period after a half-hour warm-up at 25°C, with the input voltage held constant at the rated input/output.
4. Refer to the manual for the input range.

Implementation • Mounting Method

Mounting method

- The unit can be mounted in any direction. When two or more power supplies are used side by side, position them with proper intervals to allow enough air ventilation. Aluminum base plate temperature around each power supply should not exceed the temperature range shown in "Derating".

- Avoid placing the DC input line pattern lay out underneath the unit, it will increase the line conducted noise. Make sure to leave an ample distance between the line pattern lay out and the unit. Also avoid placing the DC output line pattern underneath the unit because it may increase the output noise. Lay out the pattern away from the unit.

- High-frequency noise radiates directly from the unit to the atmosphere. Therefore, design the shield pattern on the printed circuit board and connect its one to FG. The shield pattern prevents noise radiation.

Stress onto the pins

- When too much stress is applied to the pins of the power supply, the internal connection may be weakened. As shown in right figure avoid applying stress of more than 29.4N (3kgf) on the input pins/output pins (A part) and more than 9.8N (1kgf) to the signal pins (B part).

- The pins are soldered on PCB internally, therefore, do not pull or bend them with abnormal forces.

- Mounting hole diameter of PCB should be 3.5mm to reduce the stress onto the pins.

- Fix the unit on PCB(fixing fittings) by screws to reduce the stress onto the pins. Be sure to mount the unit first, then solder the unit.

Soldering temperature

- Flow soldering : 260°C less than 15 seconds.
- Soldering iron
  - DC IN/DC OUT/RC1 : 450°C less than 5 seconds.
  - Signal pins : 350°C less than 3 seconds (less than 20W)
Derating

- Use with the conduction cooling (e.g., heat radiation by conduction from the aluminum base plate to the attached heat sink). Below shows the derating curve based on the aluminum base plate temperature. In the hatched area, the specification of ripple and ripple noise is different from other areas.
- It is necessary to note thermal fatigue life by power cycle. Please reduce the temperature fluctuation range as much as possible when the up and down of temperature are frequently generated. Contact for more information on cooling methods.

Instruction Manual

- It is necessary to read the "Instruction Manual" and "Before using our product" before you use our product.

Instruction Manual: https://en.cosel.co.jp/product/powersupply/DBS/
