AC-DC Power Supplies Bus Converter · Power Module Type

# **DPG-series**

### Power factor correction module

#### Feature

Harmonic attenuator (Complies with IEC61000-3-2) High efficiency 93% (AC100V), 96% (AC200V) Universal input voltage (AC85 - 264V) Built-in inrush current protection Built-in overvoltage and thermal protection circuits Enable signal (ENA) Auxiliary power supply for external signal (AUX) Ideal for distributed power systems

#### 5-year warranty

CE marking

Low Voltage Directive RoHS Directive

#### UKCA marking

Electrical Equipment Safety Regulations RoHS Regulations

#### Safety agency approvals

UL, C-UL recognized, TÜV approved

\*1

Refer to "Derating". When the input voltage is more than 240V, the output voltage becomes the value proportional to the input voltage. \*2

\*3 The value included the output setting and the line regulation, the load regulation and the temperature regulation.

However, the input voltage is less than 240V. Refer to the instruction Manual.

\*4

\*5 The thermal protection stops the power factor corrector function and the ENA signal.

\*6 Please contact us about class C.

#### Pin Configuration

| No. | Pin Connection | Function  |  |  |  |
|-----|----------------|---|--|--|--|
| 1   | AC1            | AC Input  |  |  |  |
| 2   | AC2            | AC Input  |  |  |  |
| 3   | R              | External resistor for inrush current protection |  |  |  |
| 4   | +VOUT          | +DC output                                      |  |  |  |
| 5   | -VOUT          | -DC output                                      |  |  |  |
| 6   | AUX            | Auxiliary power supply for external signal      |  |  |  |
| 1   | ENA            | Enable signal                                   |  |  |  |

#### Implementation • Mounting Method

#### Mounting method

- The unit can be mounted in any direction. When two or more power supplies are used side by side, position them with proper intervals to allow enough air ventilation. Aluminum base plate temperature around each power supply should not exceed the temperature range shown in "Derating".
- Avoid placing the AC input line pattern lay out underneath the unit, it will increase the line conducted noise. Make sure to leave an ample distance between the line pattern lay out and the unit. Also avoid placing the DC output line pattern of DC-DC converter underneath the unit because it may increase the output noise. Lay out the pattern away from the unit.
- High-frequency noise radiates directly from the unit to the atmo- sphere. Therefore, design the shield pattern on the printed circuit board and connect its one to FG. The shield pattern prevents noise radiation.

#### Stress onto the pins

- When too much stress is applied to the pins may damage internal connections. Avoid applying stress in excess of that shown in right figure.
- The pins are soldered onto the internal PCB.
  - Therefore, Do not bend or pull the leads with excessive force.
- Mounting hole diameter of PCB should be 3.5mm to reduce the stress to the pins.
- Fix the unit on PCB (fixing fittings) by screws to reduce the stress to the pins. Be sure to mount the unit first, then solder the unit.

#### Soldering

- ■Flow soldering : 260°C less than 15 seconds.
- ■Soldering iron : 450°Cless than 5 seconds.

Less than 19.6N

#### Derating

#### Derating curve for input voltage

Below shows rated output for each input voltage section. Maximum output should be within this range.

#### Output voltage derating curve

Use with the conduction cooling (e.g. heat radiation by conduction from the aluminum base plate to the attached heat sink). Below shows the derating curve based on the aluminum base plate temperature. In the hatched area, the specification of Ripple and Ripple Noise is different from other areas.

Please measure the temperature on the aluminum base plate edge side when you cannot measure the temperature of the center part of the aluminum base plate. In this case, please take 5deg temperature margin from the derating characteristic of Below.

It is necessary to note the thermal fatigue life by power cycle. Please reduce the temperature fluctuation range as much as possible when the up and down of the temperature are frequently generated. Contact us for more information on cooling methods.

#### **Instruction Manual**

It is neccessary to read the "Instruction Manual" and "Before using our product" before you use our product.
