Assembling and Installation Method

Installation

- When two or more power supplies are used side by side, position them with proper intervals to allow enough air ventilation. Ambient temperature around each power supply should not exceed the temperature range shown in "Derating".

Soldering Conditions

- (1) Flow Soldering : 260°C 15 seconds or less
- (2) Soldering Iron : maximum 360°C 5 seconds or less

Stress to Pin

- Applying excessive stress to the input or output pins of the power module may damage internal connections. Avoid applying stress in excess of that shown in right figure.
- Input/output pin are soldered to the PCB internally.
Do not pull or bend a lead powerfully.

- If it is expected that stress is applied to the input/output pin due to vibration or impact, reduce the stress to the pin by taking such measures as fixing the unit to the PCB by silicone rubber, etc.
- Due to prevent failure, PS should not be pulled after soldering with PCB.

Derating

Derating curve for input voltage

●MGF3/MGFS10

■MGFS3, MGFW3, MGFS10 and MGFW10 has derating by input voltage is required. shown below.

●MGX1R5/MGX6

■MGXS1R5, MGXW1R5, MGXS6 and MGXW6 has derating by input voltage is required. shown below.

Ambient temperature derating curve

■It is necessary to note thermal fatigue life by power cycle. Please reduce the temperature fluctuation range as much as possible when the up and down of temperature are frequently generated.

■In case of forced air, ventilation must keep the temperature of point below the temperatures shown in Instruction Manual 7.
