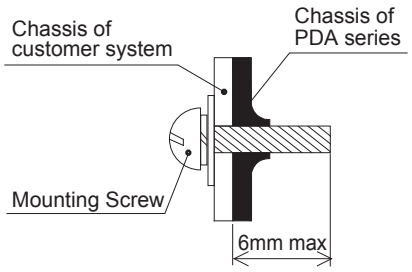
Assembling and Installation Method

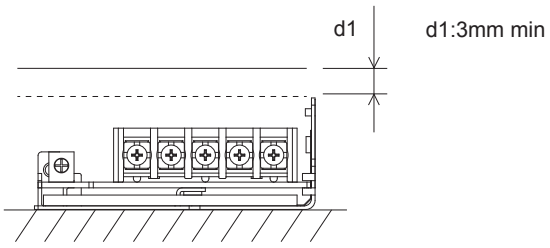
Installation method

■Do not insert a screw more than 6mm from the outside of a power supply to keep enough insulation distance between the screw and internal components.

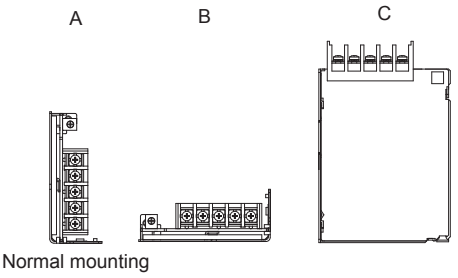


● PDA15F, PDA30F, PDA50F, PDA100F, PDA150F

■For the metal chassis, keep the distance d1 for isolation between component and metal chassis.
The d1 dimension is the distance required for insulation and does not satisfy cooling conditions. For cooling conditions, please refer to “Derating” and section 3 of the instruction manual.

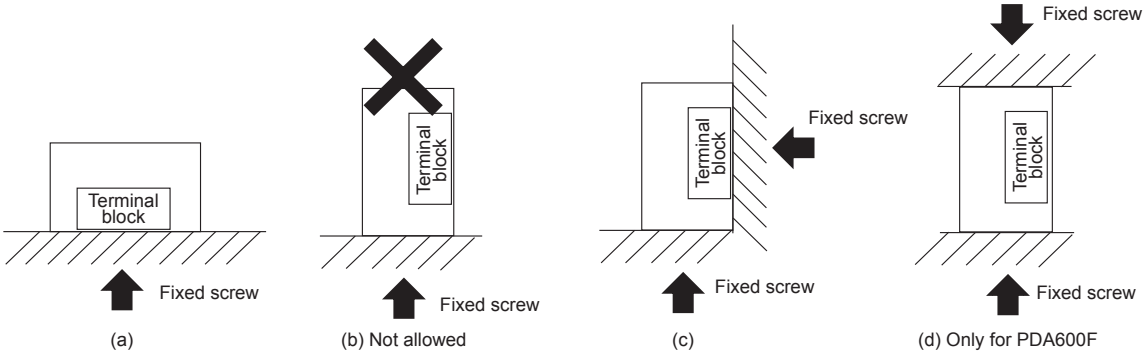


■If you use two or more power supplies side by side, please keep a sufficient distance between them to allow enough air ventilation.
■Ambient temperature around each power supply should not exceed the temperature range shown in “Derating”.

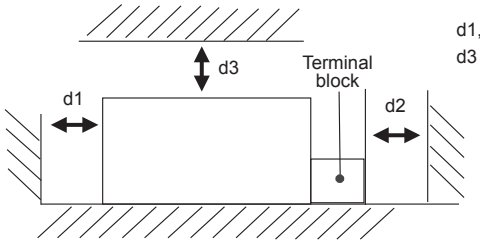


● PDA300F, PDA600F

■If you need to secure a power supply by screws, securely fix it, taking into consideration of its weight. You can install it in any direction.



■If you use a power supply in a dusty environment, it can cause a failure. Please consider taking such countermeasures as installing an air filter near the suction area of the system to prevent a failure.
■The power supplies have a built-in forced cooling fan. Do not block ventilation at the suction side and its opposite side.



d1,d2 : 30mm min
d3 (Only for PDA300F) : 30mm min

Derating

■The operating ambient temperature is different by with / without chassis cover or mounting position.
■In the hatched area, the specification of Ripple, Ripple Noise is different from other area.
■The ambient temperature should be measured 5 to 10 cm away from the power supply so that it won't be influenced by the heat from the power supply.
■Please make sure the maximum component temperature rise given in Instruction manual 3 is not exceeded.
■Please contact us for more information about operating ambient temperature.
