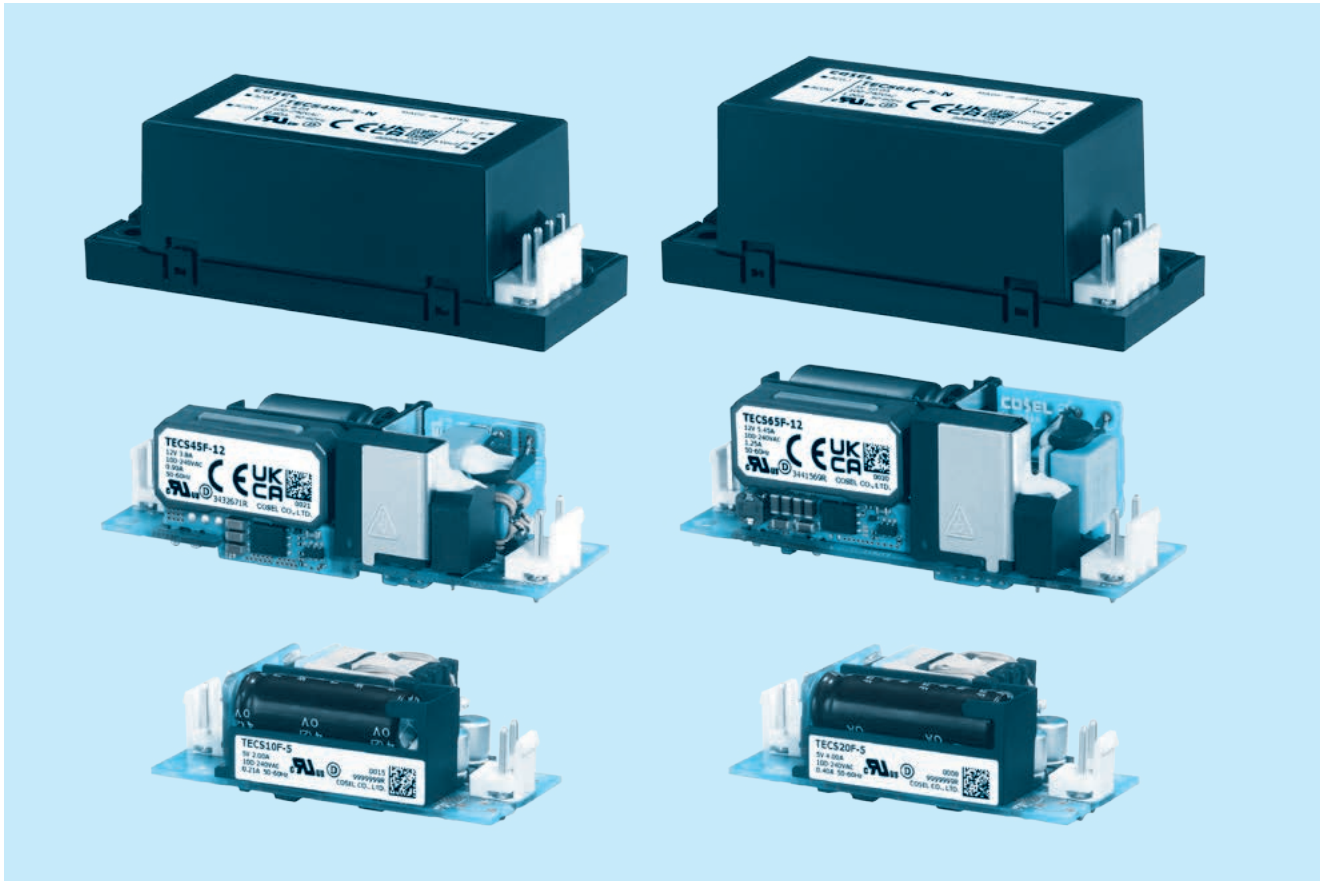
TECS-series



Feature

Small
1"×2.3" (TECS10F/20F), 1"×3" (TECS45F/65F)
High efficiency
Harmonic attenuator (Complies with IEC61000-3-2)
Universal input (85-264VAC)
Built-in inrush current, overcurrent and overvoltage protection circuits
ClassII

Safety agency approvals

UL62368-1, C-UL (equivalent to CAN/CSA-C22.2 No.62368-1), EN62368-1
Complies with DEN-AN

5-year warranty (refer to Instruction Manual)

CE marking

Low Voltage Directive
RoHS Directive

UKCA marking

＊1 The listed options may affect the published standard specifications. Please contact us for detailed product specifications.
＊2 Derating is required. ( ) means peak current. There is a possibility that an internal device is damaged when the specification is exceeded. Please contact us about the detail.
＊3 At low load conditions, the burst mode operation will start. To check load regulation, you will need to measure the characteristics at average mode with instruments.
＊4 This is the value that measured on measuring board with capacitor of 22μF and 0.1μF at 150mm from output terminal. (Refer to Instruction Manual)
＊5 5V, 12V output product, the maximum temperature of 40℃.
＊6 Drift is the change in DC output for an eight hour period after a half-hour warm-up at 25℃, with the input voltage held constant at the rated input/output.
＊7 When secondary circuit will be connected to earth, the spec will be changed. (Refer to Instruction Manual 2)
＊8 Please contact us about another class. When two or more units are operating it may not comply with the IEC61000-3-2. Please contact us for details.
＊ To meet the specification, do not operate overload condition.
＊ Parallel operation is not possible.
＊ Sound noise may be emitted from the power supply depending on operating conditions.

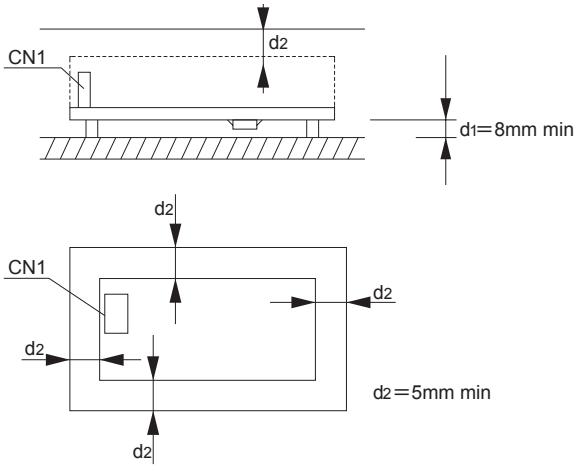
※ Dimensions in mm, [ ]=inches
※ Tolerance : ±1.5 [±0.06]
※ Weight : 70g max (with cover : 90g max)
※ PCB Material / thickness : FR-4 / 1.1mm [0.04]
※ Optional Case Material : PBT
※ Maximum current per contact at CN2 is 5A.
※ There are two mounting holes.

Assembling and Installation Method

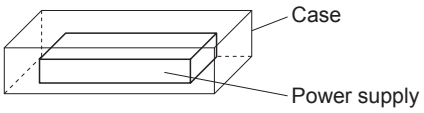
Installation method

■This power supply is manufactured by SMD technology. Do not touch any SMD components on the unit. Be especially careful when handling.

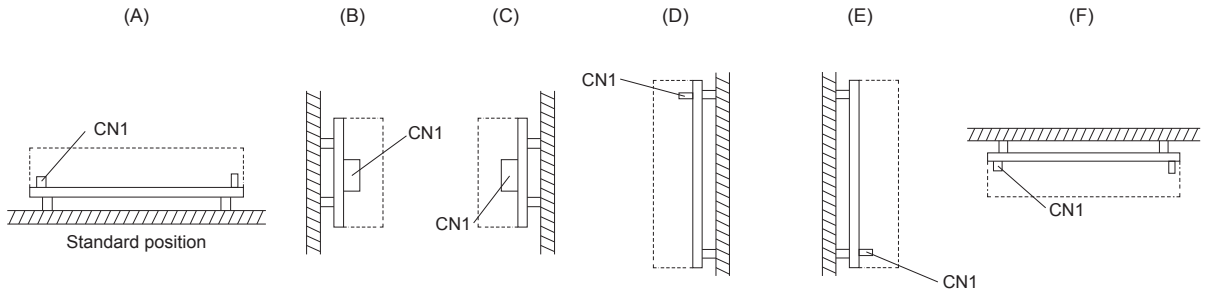
■If using a metal chassis, keep proper insulation between the component and metal chassis, use the spacer of 8mm or more between bottom of power supply and metal chassis (except -N model).
If d1 and/or d2 are less than the value mentioned in right figure, insert an insulating sheet with reinforced insulation between the power supply unit and metal chassis (except -N model).
The following distance is not satisfactory for cooling condition. Please refer to “Derating” and Instruction Manual 4 for cooling method.



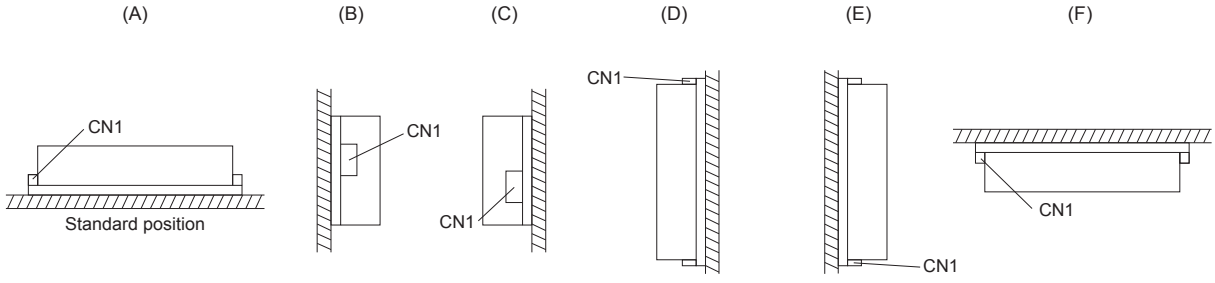
■There is a possibility that it is not possible to cool enough when the power supply is used by the sealing up space as showing in right figure.
Please use it after confirming the temperature of points ① of Instraction Manual 4.



■Standard model can be mounted in the mounting position shown in the figure below.

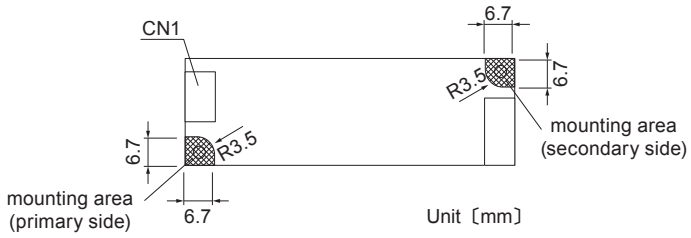


■Option-N model can be mounted in the mounting position shown in the figure below.The installation of (F) possible only forced air cooling.



Mounting Area

■The mounting screw should be M3. The hatched area shows the allowance of mounting area.



■The mounting area (primary side) must be insulated from areas that user accessible parts of the final product, so if the enclosure is metal and the mounting components and spacers are metal, be careful to insulate them.

■When installing, be careful to avoid contact with mounted components.

■This product uses SMD technology. Please avoid the PCB installation method which includes the twisting stress or the bending stress.

■Do not touch any SMD components on the unit and soldering points.
